## DETAILED ACTION

### *Election/Restrictions*

A telephone call was made to Gary S. Williams (reg. #31,066) on 7 June 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14, drawn to a memory system, classified in class 711, subclass 167.
- II. Claim 15, drawn to a memory system capable of selectively operating in first and second modes, classified in class 713, subclass 300.
- III. Claims 16-18, drawn to a method of reading data in a memory system during a first time period, the memory system comprising a memory

controller connected to memory devices via a data bus having multiple data bus lines, classified in class 710, subclass 107.

Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as power conservation in any system with multiple peripheral or memory devices. Invention III has a separate utility such as bus line arbitration in any memory controller having multiple control lines. See MPEP § 806.05(d). Claims 1 and 11 (group I) represent the combination that could use the subcombinations, more specifically pointed out in groups II and III, for example.

Examiner also notes that these groups represent divergent searches, and are, therefore, a burden on the examiner. For example, group II will require a search in power control and/or power conservation, while group III will require a search in bus line arbitration. Neither of the separate and distinct searches required for groups II and II are required for group I.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christian P. Chace whose telephone number is 703.306.5903. The examiner can normally be reached on 9-4-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Donald Sparks can be reached on 703.308.1756. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
